

# Ruby Block Exercises

## 1. Iterate through an array

Given an array of city names:

```
cities = ['helsinki', 'tokio', 'johannesburg']
```

Use the each block to capitalize each city name:

```
cities.each do |city|  
  city.capitalize!  
end
```

What is the significance of using the "bang" method (.capitalize!)?

## 2. Upper Case Names

Create an array of four names and use the each block to print out each name in upper case.

Do not modify the original array and use the online Ruby documentation (<http://www.ruby-doc.org/core/>) to find out how to convert strings to upper case.
